MediSecure as Major Sponsor of the RACGP GP'09 Conference

NEWS RELEASE – FOR IMMEDIATE RELEASE

In keeping with its commitment to supporting doctors and their professional bodies, MediSecure is proud to announce it is the major sponsor for **GP'09 - The Conference for General Practice 2009**.

"GP'09 is the most important educational and networking event for doctors on Australia's general practice calendar and we consider it a privilege to work with the Royal Australian College of General Practitioners to present what will undoubtedly be a hugely successful conference in Perth" said Paul Montgomery, Chairman of MediSecure Pty Ltd.

"We are delighted that MediSecure® has come on board with the college as the major sponsors for GP'09. Sponsorship is vital to the viability of conferences such as ours and it is really pleasing to have such a closely aligned company taking up this opportunity. I encourage all GPs to consider using the MediSecure® system in their practices and to find out more about e-prescribing and its importance in the current health environment," said Dr Chris Mitchell, RACGP President.

MediSecure® is the secure and simple e-prescription solution that is actively supported by the RACGP and Australian Association of Practice Managers. Once a doctor signs onto the MediSecure® service, it takes prescriptions from doctors and transfers them to a secure Script Vault® from where they can be downloaded by any pharmacy the patient chooses. The MediSecure® system is easy to use and works in background. It requires no special IT expertise.

MediSecure delivers the best possible security through compliance with HL7 and IT14 current and emerging clinical data standards. MediSecure is committed to open architecture and allowing all medical practitioners and their IT systems to participate in the important e-health reforms that are led by e-prescriptions.

MediSecure® believes interoperability is the key to making life simpler for medical professionals and to improving patient safety. Currently, doctors are sending scripts to the MediSecure Script Vault® from three Clinical systems and these e-scripts are being downloaded by Pharmacists using three Dispense systems. Repeat MediSecure® e-scripts can be dispensed in pharmacies using any of these three systems. This multi-platform capacity makes MediSecure® the first Australian e-prescription service to operate across traditional IT system boundaries.

"MediSecure® is working towards integration with all clinical and dispense systems in Australia. Our commitment to standards and interoperability is in line with the RACGP's expectations for e-prescriptions and it demonstrates the deliverable nature of the National Health & Hospitality Reform Commission recommendations and the National e-Health Strategy," said Phillip Shepherd, MediSecure CEO.

MediSecure® is available throughout Australia and is actively supported by the RACGP.

MediSecure® will be present at **GP'09** and invites all delegates to visit the MediSecure® stand to find out more about e-prescriptions and their importance in the e-health reforms being introduced.
